

ScopeGuard PDF Runtime Fixture

This file contains ordinary text, a repeated table header, metadata, three pages, and stable page labels. It contains no company data.

Operation	Expected behavior	Risk
Inspect	Keep page order and metadata	Low
Rotate	Rotate only the selected page	Medium
Merge	Preserve source page content	Medium
Split	Expose document-level losses	High

Page Two: Rotation Target

The prototype rotates this page by 90 degrees while preserving the source file. A separate pass-through output must render identically.

Page Three: Assembly Target

This final page verifies page count, ordering, and deterministic raster output after a content-preserving qpdf rewrite.
